

Recommended Hardware

In order to backup DVD & Bluray discs, nearly any modern Bluray drive will work. Backing up 4k Bluray (UHD) disks requires specific drive and firmware combinations.

Useful information on firmware and hardware can be found in the [4k\UHD section of the Makemkv Forum](#)

- [Jason's Drive List](#)

Jason's Drive List

These are the Drives I currently use with Makemkv and are known good.

- LG WH16NS60 (Updated with the firmware referenced in the Makemkv Forum)
- Pioneer BDR-S13U - Purchased Pre-Flashed but seller no longer has in stock

Drive Enclosure - All the drives I use were for Internal use so I use the following Enclosures. (I have had problems with generic or less expensive enclosures)

- OWC Mercury Pro
