

Filebot

Software:	Filebot		
Why\Problem Solved:	Filebot helps automate renaming and moving your processed medial files into their permanent storage location. It uses tmdb to help identify and rename files so they are accurately <u>identified by plex</u> etc.		
Cost:	\$6.00 Annual or \$48 Lifetime	Link:	https://www.filebot.net/
Tips:	• If Filebot doesn't quickly identify your file try renaming it to remove the extra characters etc that Makemkv can sometimes add. • It can be helpful to know the year the movie was released and include (year) in the file name when a match is being difficult. • You can customize the file presets to include additional info such as Editions etc. In the example below I include my M: drive so in addition to renaming it's moving the final file to it's permanent location as part of the action.
